

Orancan

Website:

- Implementation of design as per Invision. Most of the pages are coded by the other guy, some will have to be coded. The other guy's design is not perfect. It needs to be improved and made look exactly like Invision. The website needs to be completely responsive.
- Some of the features in the new design may not exist in the back end, which will have to be coded.
- Addition of more products like Hoodies, Posters and canvases. This module has been coded by some other guy, it needs to be checked if it's working or not.
- There's a bug in the current site that doesn't send orders placed via CCAvenue to the 99Prints API. COD orders are sent alright. Orders of t-shirts and hoodies are sent to 99Prints API for processing.
- Mockups (product images) need to be changed.
- There is an International Module that allows user to shift to USD or INR using a dropdown. We need to auto-detect the location using IP and show USD or INR.
- Orders with multiple products may have to be clubbed if there are different types of products. Posters and canvases are manufactured at a different place and hoodies, t-shirts at a different place. So if an order consists any of these 2, the order will be sent in multiple packages. So different Tracking ID for t-shirts and canvases.
- Yet to be added in the design:
 - Sizing and Product info pop up on product page
 - Sales history in Your Store under Your Account
 - Congratulations! Your product is live pop up after product submission by artist
 - What is Orancan? & Contact us - Static pages.

Admin Panel:

- Show all users database / Number of designs added, Number of orders placed, number of products sold
- Show all orders database
- E-mail system:
 1. E-mail sent to artist when payment is done
 2. E-mails sent to customers when their order status is updated
 3. E-mails sent to artists when a product of them is sold, when their artwork is deleted or updated or featured, etc.
 4. E-mail sent to admin ID when an order is placed.

Basically every update will be sent to user via e-mail.

- Ability to delete any artwork / archive them / make them private to the user
- Ability to set any artwork as featured, which will display that artwork in the featured artworks list in Homepage.
- Ability to update the base prices of any size of any product. Ex. S,M,L sizes of t-shirts can have different base prices, t-shirts can be of different type, like round neck, v-neck, full sleeve having different base prices. Products can be multiple too, as of now there are going to be t-shirts, hoodies, posters, canvases.
- Ability to enter the shipping tracking ID for the user to track it. If the 99prints API provides the ID via API, we can simply extract it. Still, ability to edit it.
- Payments: Pending payments of artists. Shows the currency choice of the artist and the amount to be paid in total, in the currency choice. Ability to sort through previous payments of that artist or the sales relating to those payments
- Stats homepage – Displays overview. Sales (ability to sort, month wise or week wise etc), Users (ability to sort), Other stats from Google Analytics (if possible, not necessary)
